DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

Claim 1 is rejected under 35 U.S.C. 102(e) as being anticipated by
Hockaday(6246144).

Hockaday discloses in fig 1. A brush holder for a dynamo-electric machine, wherein a spring(46) and a brush(18a) are set in a brush holder base (10), and a terminal plate (30a) and a pigtail (34) are connected in an area within 90 degrees from an introducing portion of the pigtail in the brush towards and outside of the brush holder.

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-20 is rejected under 35 U.S.C. 103(a) as being of Hockaday(6246144) in view of Takeuchi (5810,111). Hockaday discloses a brush holder describe in the above

paragraph wherein the terminal (30a) and the pigtail (34) are connected in an area around a sliding axis of the brush (18a) within the width of the brush and wherein the pigtail(34) is introduced from the brush in a direction towards a motor shaft and a column(66a) is extending from the terminal plate(30a) to connect with the pigtail.

Hockaday does not disclose a motor for electric power steering.

Takeuchi discloses in fig.1 a motor for a power steering rotatable in both directions. Therefore, it would have been obvious to one having ordinary skill in the art to employ the brush holder of Hockaday with the power steering device of Takeuchi for the purpose of generating less electromagnetic noise and high reliability.
